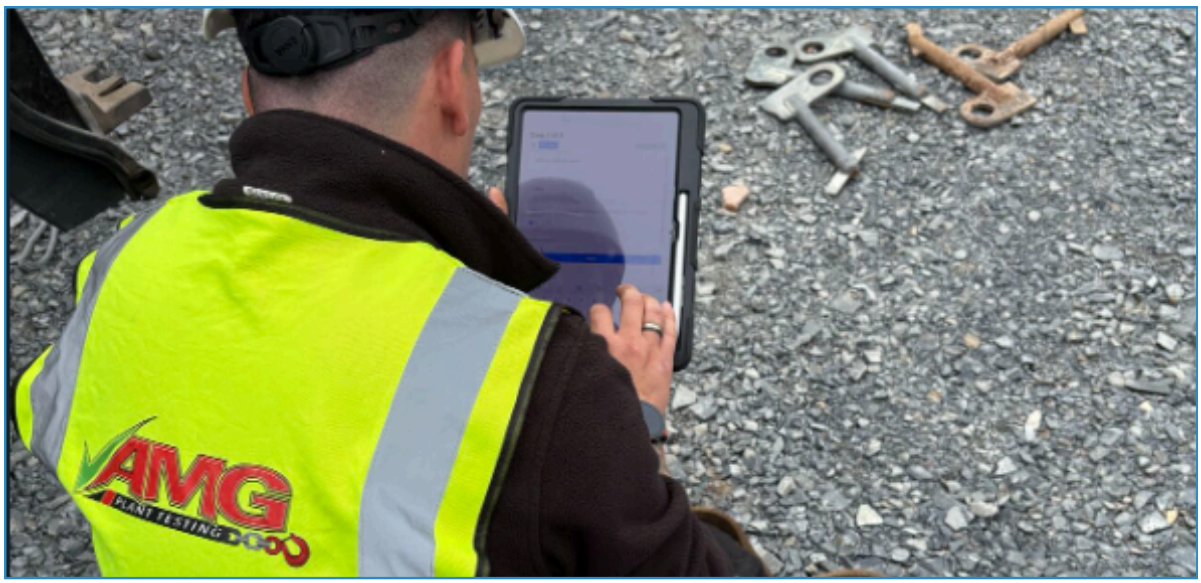
How AMG Plant Testing Conducted 533 LOLER Inspections in a Day with CheckedOK



Michael Warnock first noticed something different - a competitor's certificate produced by CheckedOK looked so much better than his own team's. "The visibility was terrible," Michael says. "Bulk inspections took forever. It was just long-winded." AMG Plant Testing is a lifting inspection company working across the UK and Ireland, handling LOLER, GA1, and PUWER on thousands of items, but their old software was holding them back.

The Search for Effective Inspection Software

Michael considered rebuilding their system until he realised most competitors relied on generic platforms. He wanted something built specifically for lifting inspections. *"The platform seemed easier to use,"* Michael explains. *"And I got a better feel for the support side – much quicker to react to issues. That customer service aspect felt more responsive."* CheckedOK stood out, purpose-built for compliance, and the subscription model meant no upfront cost or extra development fees - a major plus.

Rolling Out CheckedOK

AMG didn't need a chaotic rollout. CoreRFID's approach matched their needs: training sessions spaced out, recorded for ongoing review. *"There's loads in the system we haven't touched yet,"* Michael says. *"But we wanted to master inspections first before expanding."* The team was able to focus and retain what they learned, avoiding overwhelm.

What the client says

I'd have no problem recommending CheckedOK. I'd recommend it based on how simple it is to use. "I was surprised at the speed. It's so much more efficient for the engineers. We can get more done.

Michael Warnock
Director

Greater Efficiency & Customer Satisfaction

Surprising Gains in Efficiency

Switching to CheckedOK transformed AMG's daily work. Recently, the team inspected 533 pieces of equipment for Electricityworx in a single day; 43 items failed and were replaced immediately, keeping the customer compliant with Monday deadlines. *"I was surprised at the speed,"* Michael admits. *"It's so much more efficient for the engineers. We can get more done."* Fast sign-ins, intuitive interfaces, automatic certificate generation, and seamless back-office sync replaced the slow, error-prone manual process. Offline capability proved invaluable, keeping engineers productive even on sites with poor connectivity.

Delivering What Customers Want

Customers quickly noticed the difference. Certificates look cleaner and are easier to read. Inspection data can now be exported to Excel, filtered by location or equipment, and analysed as needed. *"Some of these sites have so much equipment they struggle to keep an asset register,"* Michael says. *"The inspections we carry out let them keep track. They can't always give us a list or serial numbers, but we capture that for them."* QR codes further simplify audits and provide instant access to equipment history.

Next Steps and Future Plans

AMG's vans now carry replacement gear so failed items are swapped out immediately. Collaboration with CoreRFID and LEEA aims to integrate inspection and installation certificates even more closely. AMG looks forward to using additional CheckedOK features like custom test templates and pre-use check tracking. *"There's more room for improvement and adoption,"* Michael shares. *"We've only partially touched on certain aspects of the system. In the coming months, we'll tap into different areas."*

Recommendation and Support

"I'd have no problem recommending CheckedOK," says Michael. *"I'd recommend it based on how simple it is to use."* Support has been crucial. When certificates didn't show up, CoreRFID was quick to respond and fix the issue. *"Software isn't always perfect. There are bugs, updates needed from time to time. The reactive support is what is most important, and it's been a big positive."*

BENEFITS

- **Huge efficiency gain:** 533 inspections completed in a single day, with smooth bulk certificate generation and instant syncing.
- **Clean, customer-friendly reports:** certificates are easy to read and export for analysis. Customers get visibility and peace of mind.
- **Offline capability:** engineers stay productive on remote or low-connectivity sites, keeping jobs moving.
- **Responsive support and ongoing improvements:** quick fixes and new features keep AMG operating at peak efficiency.
